

ICT : A GOOD CHANCE TO STAY AND WORK HERE IN MY REGION

Madeira and Isernia are similar in their geographical, social and economic contexts.

The project will aim at identifying the level of ICT skills of the students belonging to both regions to activate new courses to fill the gap between the student's knowledge and what the firms want. To this aim at first it will proceed with the analysis and comparison of the Educational Proposal of the two schools regarding the use of ICT.

Contemporarily the Chambers of Commerce will carry out a sample to research and analyse the ICT skills which are mostly demanded by the companies that operate on both regional territories.

On the basis of the results the school could activate training course to improve the students' ICT basic competences.

At the same time, the results of the research made by the Chamber of Commerce, will offer the hints to introduce a new topic about the ICT to develop students' ICT skills mostly demanded by our regional working world.

At the end, on the basis of the results of the statistical survey, various models of teaching methods, capable of responding to the demands of the market, will be achieved.

The main objective is to allow our students to develop those ICT skills which can be used in the working field in our regions, thus, avoiding a further depopulation of the areas concerned

So we can give to our students "*a good chance to stay here in my region*".
